MOBILE DIGITAL HOME

Not only can you now view movies on your laptop, but you can also view television. Asus has introduced a W2Vc notebook with a built-in antenna. So you can take your digital HDTV anywhere and watch it. With a built-in subwoofer for quality sound and a 17" wide screen, you'll never be out of touch. Prices start at \$4440.

1BOX DOES IT ALL

Imagine replacing your bulky CD collection and movies with one box that is no larger than an average stereo component. Now you can with 1Box.

Digital TV and 1Box go hand-in-hand, allowing you to watch live TV, pause for a break then resume when you are ready! 1Box can automatically record the broadcast in the meantime and allows you to watch what you have missed or fast-forward to the live broadcast. In addition to this, electronic program guides make recording TV as simple as looking up your favourite shows in the guide, and 1Box will set timers and take care of the rest for you.

1Box has a quiet and stylish case featuring high fidelity playback straight from your stored music collection, CD, Internet music download, DVD, TV or streaming radio. You can even plug your digital camera or memory card straight into 1Box and it automatically displays your photos as a slide show. And 1Box can even perform as a standard computer, allowing you to surf the Internet, send email, play games or complete any other normal computer function.

1Box is truly a leap forward in the application of technology for everyday use. Visit www.1box.com.au for more information on this revolutionary solution to your home entertainment needs.

TRANSFORMING THE MOBILE DJ

Who Needs Vinyl When You Can Move Into A New Digital Model?

The iDJ Mixing Console is a 2-channel mixer that allows you to plug your iPod music into a turntable. This means that mobile DJs and iPod enthusiasts can integrate portable music libraries with other music and sound systems. And you can transform the iPod from your personal music player into a source playback device, as well as upload it back to the iPod. It also allows you to plug in a microphone to mix and record your vocals. And it's gotta be so much lighter than carrying around your decks! Prices start at \$699.

LOCK UP YOUR NETWORK THIS CHRISTMAS

We're all aware that Christmas is a vulnerable time for house break-ins so we all take extra measures in securing our homes and offices. But what about locking up our computer networks? If you rely totally on internal computer protection, you also rely on single systems and individuals. What happens when your IT person goes on leave?

Each year, AusCERT carries out a survey across a broad range of industry sectors and this year, from nearly 200 organisations surveyed, 35 percent reported electronic attacks. While internal security does help, it can be further reduced by using managed services. One of these services is IPWAN from

Telstra. This includes excellent security measures as well as being backed up by Telstra's infrastructure.

While many organisations are still using unsecured VPN's, IPWAN provides network security via Telstra's managed service, while also providing secure and reliable communications for connectivity with satellite offices and or clients locations.

The IPWAN also provides a mechanism for organisations to reduce overall IT costs by means of running applications securely across the service, reducing both infrastructure and support costs.

BOOST YOUR WEBSITE CONVERSION RATES

ClickCalling is a new product that allows instant phone connection from websites. Essentially, it acts like a button. As a website visitor, you click on the ClickCalling icon, then you'll see a drop down box that invites you to enter in your phone number. You then click on the "call" button, your phone will ring instantly, and when answered, you're connected to the advertiser. This means, as an advertiser, you can talk to a potential customer while they're actually looking at your web page. There are no set-up costs or monthly fees. Advertisers just pay per click. Perfect for bringing that one-to-one communication back to the electronic age.

CDE-9841E - \$269

NOW \$199
